

Cooling & Heating Division

Multi-energy
Vapour Absorption
Machines

40 TR - 4000 TR (140 kW to 14000 kW)

From the leader in innovative cooling and heating solutions

Vision

To be a globally respected high performance organization offering sustainable solutions in energy and environment.

Sustainable Solutions

From Cooling to Heating, from Power Generation to Air Purification, from Water and Sewage Treatment to Speciality Chemicals, THERMAX Solutions are improving life at work in many ways.

Every year THERMAX helps generate 6,000 MW of Power, produce 100,000 tons of steam, provide 1 million tons of Cooling and treat 1,000 million litres/day of Water and Waste.

THERMAX today is a major Engineering and Environment company with revenues of USD 800 million and with market capitalization of over USD 1 billion.

THERMAX was one of 20 Indian companies in Forbes list of "Asia's Best Under a Billion Companies" in 2005 and 2006 and was ranked "No. 1 among the top 21 wealth creators" in India over the last 5 years by a leading investment journal.

THERMAX brings to customers enriched experience of industrial applications, and expertise through technological partnerships and strategic alliances.

Operating from its Headquarters in Pune (Western India), Thermax has built an international sales & service network spread over South East Asia, Middle East, Africa, Russia, UK and the US. It has full fledged ISO 9001:2000 and ISO 14000 accredited manufacturing setups.

Cooling & Heating Division - Cooling SBU

The Cooling SBU of THERMAX promotes Vapor Absorption Chillers as a cost effective and environment friendly alternative to electricity driven compression chillers.

It offers expert solutions in Process Chilling & Air Conditioning for industrial as well as commercial applications. Cooling SBU's strength lies in customized solutions as per the requirement of customers.

Unlike electrical chillers, Absorption Chillers are powered by heat. These machines can run on a variety of heat sources, e.g. steam, hot water, liquid/gaseous fuels, exhaust gases and/or a combination of above.

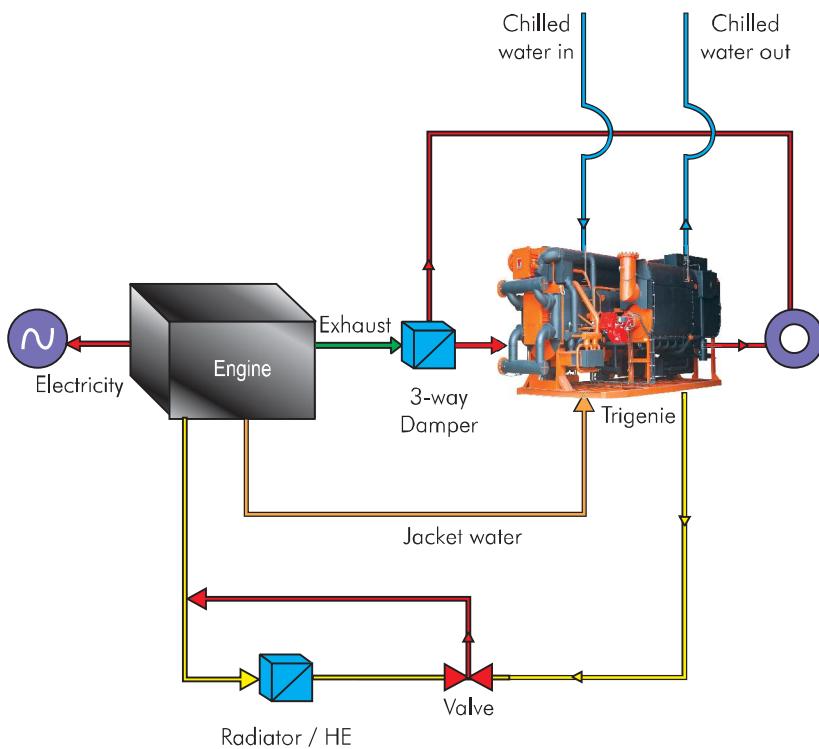

THERMAX - Conserving Energy, Preserving the Environment

Vapor Absorption Technology from Thermax is at work for clients in more than 50 industries including Pharmaceuticals, Chemicals, Fertilizers, Textiles, Petrochemicals, Food & Beverages and Automobile industries as well as in Hotels, Commercial Complexes, Shopping Complexes, Office Buildings, Educational Institutes, Airports and Cinema halls.

Manufacturing capabilities of Thermax's Cooling SBU are confirmed by the fact that, over the years, Thermax has installed numerous machines in more than 70 countries including USA, Germany, Spain, UK, Italy, UAE, Saudi Arabia, India, China, Australia, Thailand, Philippines, Malaysia, Russia and Nigeria with the products conforming to the respective country standards like ETL, CE, TUV, DNV, ASME etc. Thermax has its fully owned subsidiaries namely Thermax Inc. in USA, Thermax Europe Limited in UK and Thermax (Zhejiang) Cooling and Heating Engg. Company Limited in China.

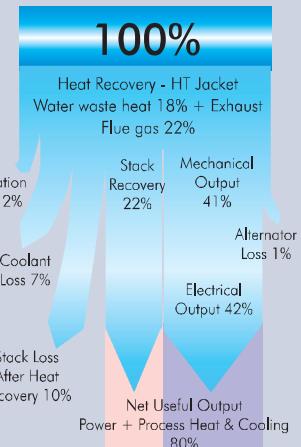

Thermax believes in efficient and responsive services to its clients and exhibits in its way of business, by giving optimal and quality solutions and achieving customer delight. Thermax has a worldwide sales, service and distribution network to fulfill the needs of its valuable customers.

The 'Trigeneration' concept

Get double the overall system efficiency!

Sankey Diagram* for IC engine
WITH HEAT RECOVERY 75 - 80%

Engine gensets normally have about 40% overall electrical efficiency. The balance 60% is wasted to the atmosphere. The conventional method is to recover the waste heat through individual recovery equipment to cater to heating/ cooling requirements.

Unique features of Trigenie

- Dump condenser - crystallisation prevention during shutdown of VAM
- Common chiller for up to 3 engines without mixing of gases - optimised capex as well as floor space
- Approximately 12 to 15% higher heat recovery from the same exhaust flow parameters with heat exchanger design - improved ROI
- Separate generator for hot water recovery - better recovery at engine part load conditions, higher COP of VAM at part load operations
- Customised exhaust gas inlet/ outlet connection to suit a site layout
- Maximising heat recovery - customised design to recover maximum heat from jacket hot water with outlet temperature as low as 70 to 75 °C
- Back pressure management - engine/ turbine always accorded first priority

Highest COP

Process design that ensures maximum internal heat recovery to give the lowest specific heat input benefit to the customer.

- Enlargement of heat transfer area - Done by all manufacturers
- Two stage evaporation - Feature unique to Thermax VAM
- Large temperature difference of chilled water - Thermax can offer ΔT as high as 30 °C
- Refrigerant heat exchanger - Feature unique to Thermax VAM
- Exhaust gas heat exchanger - Feature unique to Thermax VAM

Trigenic - designed and engineered to perform

Latest two stage evaporation technology

The unique two stage evaporation technology ensures the Lowest Specific Heat Input requirement resulting in lowest heat and water consumption.

Two stage evaporation also gives 5 to 7% higher COP than conventional single stage evaporation technology.

Advanced series flow

Parameter for HTG	Unit	Para Flow	Advanced Series Flow
HTG temperature	°C	162	155
LiBr concentration	%	64-65	60.5

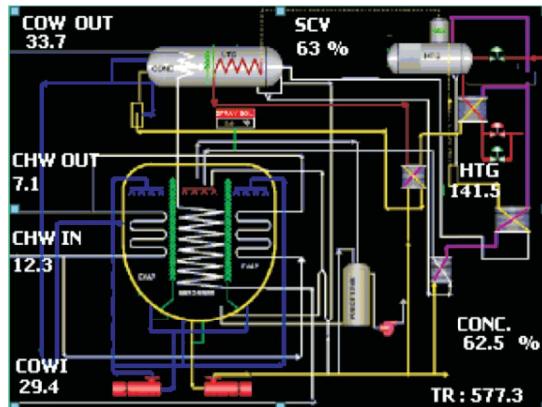

Parameter for LTG	Unit	Para Flow	Advanced Series Flow
LTG temperature	°C	88	90
LiBr concentration	%	62-64	63

Advanced series flow cycle to avoid simultaneous occurrence of high temperature and high concentration, thereby minimising the probability of corrosion.

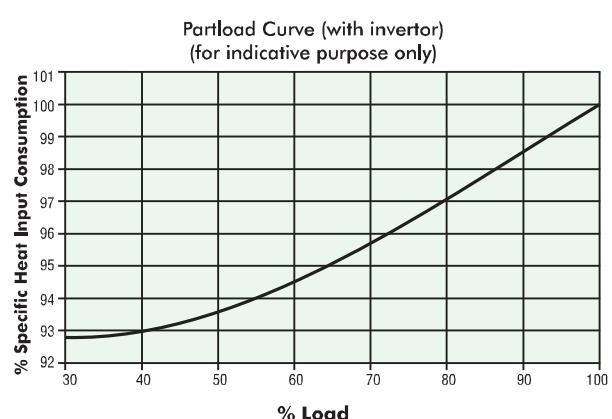

Winner of the "Bry Air Awards" in 2006, 2007 & 2010 in the "Most Innovative Product Design" category.

Zero crystallisation

Unique state-of-the-art concentration control and display that virtually eliminates crystallisation and is distinctly different from the auto decrystallisation offered by other manufacturers. This permits the VAM to run smoothly even at 10 °C cooling water inlet temperature.

AC drives

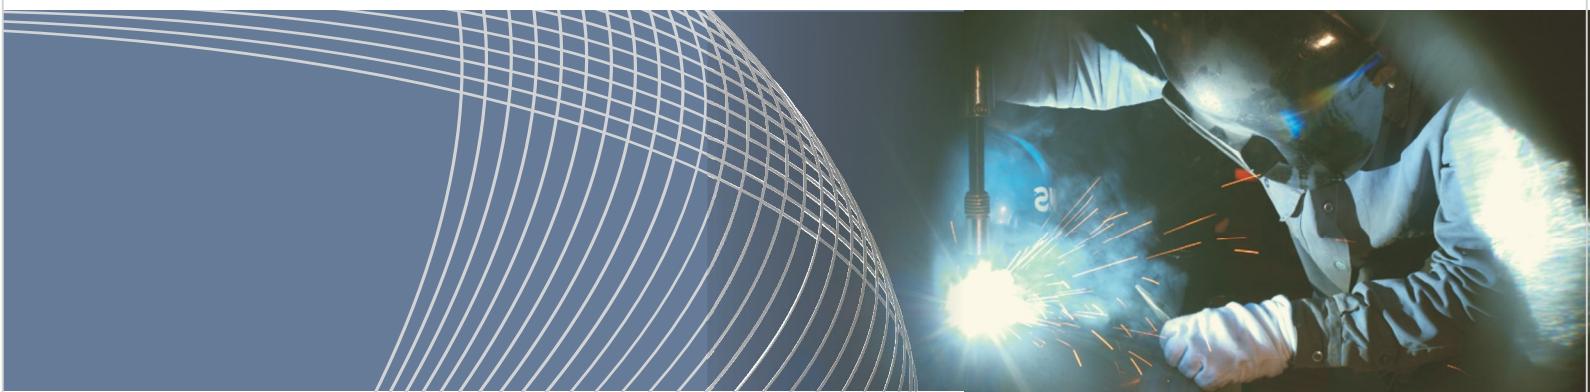

Variable frequency control on absorbent pump for higher reliability & savings in power, especially during part load operation.

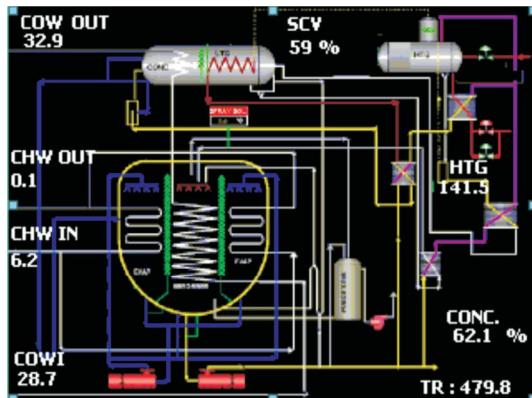

Isolation valves

Isolation valves with special seals for vacuum application and bolted pumps to facilitate machine mounted pump maintenance without any loss of vacuum in the system due to exposure to atmosphere.

Up to 0°C output

Chilled brine outlet temperature up to 0°C. In applications where temperature of less than 4 °C is critical, vapour absorption technology can now be put to use.

PLC control

PLC based control panel with display, user friendly interface and data logging system. Remote performance monitoring / DCS / BMS connectivity also possible.

Customised tube metallurgy

Special tube materials like Cupro Nickel, SS-316L, Titanium depending on water quality on site.

Corrosion inhibitor

Non-precipitating and non toxic Molybdenum based corrosion inhibitor that ensures smooth and stable performance.

Deoxidised Low Phosphorus copper tubes

These tubes conform to ASTM standards and presence of phosphorus is maintained at less than 0.005 ppm which protects the tubes from Hydrogen embrittlement in LiBr environment.

Multistage level control

Multistage level control provided in the three heat exchangers enable effective operation during part load and help avoid cavitation of solution pump.

Test bay

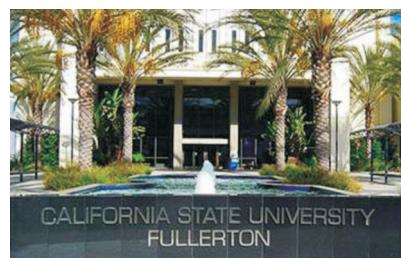

Thermax has a state-of-the-art test bay capable of testing various types of vapour absorption chillers - steam driven, hot water driven, fuel fired, exhaust driven and a combination of these up to a capacity of 3500 TR (12300 kW). The entire testing facility is centrally operated by sophisticated Distributed Control Systems (ABB make) and can be operated by the touch of a button.

- Steam : 50 - 3500 TR (175 kW to 12300 kW)
- Exhaust : 50 - 3500 TR (175 kW to 12300 kW)
- Hot Water : 10 - 1380 TR (30 kW to 4850 kW)
- Fuel Fired : 50 - 3000 TR (175 kW to 10540 kW)

Customized features to match your requirements

Online standby solution and refrigerant pumps

Thermax can offer machine mounted, standby absorbent and refrigerant pump.

Multi-sectional shipment arrangements

For convenient shipping and rigging, Thermax Vapor Absorption Machines can be shipped in two or more sections depending upon the site requirements.

Auto purging

Remote Performance Monitoring System (RPMS)

Holistic customer care

Thermax Absorption Cooling Division has a wide network of Service Centres across the globe to ensure quick response to customers. With a cumulative service experience of over 4000 VAMs operating for more than 25 years, Thermax service personnel are equipped to deliver the right solution to users.

In fact, in keeping with the company's proactive approach, Thermax has developed specific service modules for different types of users; depending on their usage pattern. For the benefit of its customers, Thermax offers various value-added services like:

- Preventive maintenance contract
- Operation & manning
- Localized customer training programs

**Backed by quality assured
manufacturing
to international codes**

- Notes:**
- 1) Model Nos. : ED XXX - HU/THU/CU/TCU Exhaust Gas driven Double Effect Chillers
 - 2) Dimensions & weights are approximate and should be used for indicative purpose only.
 - 3) These are custom built chillers, designed based on the engine and its loading condition.
 - 4) Minimum Cooling water inlet temperature is 10°C
 - 5) Ambient condition shall be between 5 to 45°C
 - 6) Maximum Allowable pressure in Chilled / Cooling water system = 8 kg/cm²(g) {784.5 kPa(g)}
 - 7) All Water Nozzle connections to suit ASME B16.5 Class 150
 - 8) Control panel Electric Input = 1kVA
 - 9) Power supply required is 415 V (±10%), 3 Phase, 50 Hz (±5%) + N
 - 10) Above specifications are valid for insulated machine.
 - 11) Technical specifications based on JIS B 8622 2002
 - 12) Please contact Thermax for higher capacities

- Notes:**
- 1) Model Nos. : EJ XXX - HU/THU/CU/TCU Exhaust Gas cum Hot water driven Multi Energy Chillers
 - 2) Dimensions & weights are approximate and should be used for indicative purpose only.
 - 3) These are custom built chillers, designed based on the engine and its loading condition.
 - 4) Minimum cooling water inlet temperature is 10°C
 - 5) Ambient condition shall be between 5 to 45°C
 - 6) Maximum allowable pressure in Chilled / Cooling / Hot water system = 8 kg/cm²(g) {784.5 kPa(g)}
 - 7) All water nozzle connections to suit ASME B16.5 Class 150
 - 8) Control panel electric input = 1kVA
 - 9) Power supply required is 415 V (+10%), 3 Phase, 50 Hz (+5%)
 - 10) Above specifications are valid for insulated machine.
 - 11) Technical specifications based on JIS B 8622 2002
 - 12) Please contact Thermax for higher capacities

TRiGENiE - working with all leading engine/ turbine makes
